OPEN FINANCE OS

Registry snapshot · October 2026

UAE Open Finance registry snapshot

Who is registered in the production trust-framework directory, who publishes an authorization server, and how much traffic the platform carries.

29
organisations
30 registration IDs, 28 Oct 2026

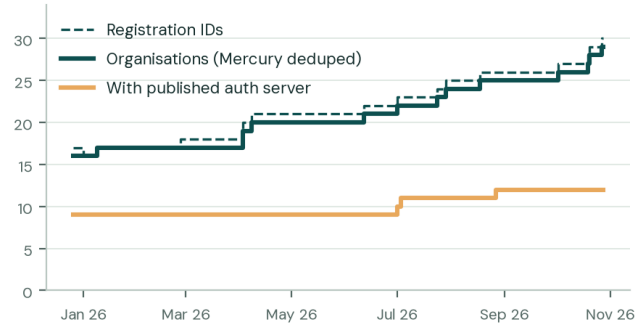

22 / 7
LFIs / non-LFIs
5 TPPs, 3 infra (Mercury is both)

12 of 29
publish an auth server
active, with an issuer

1.42M
API calls
completed months, Nov 2025 to Sep 2026

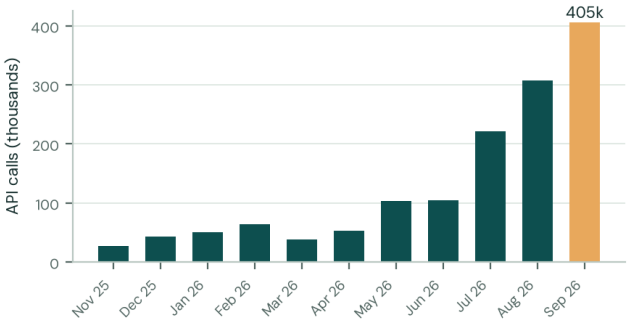

30 registrations come from 29 organisations (Mercury holds two IDs): '12 of 30' by registration and '12 of 29' by organisation are the same data.

Organisations vs published auth servers

Registry as of 28 Oct 2026 (daily production snapshots from 26 Dec 2025). Solid line counts organisations; dashed counts registration IDs.

Monthly API calls (completed months)

Activity data through 21 Oct 2026 (Al Tareq logs via Ecosystem Watch, observed 26 Oct). Sep 2026 (amber) is the latest completed month; partial Oct (431,788 to 21 Oct) excluded.

What the numbers mean

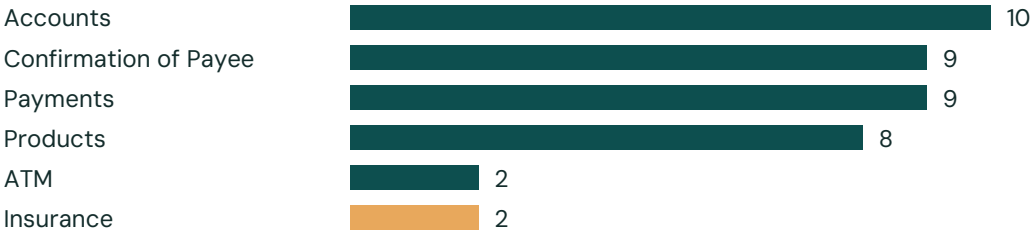

- Since 26 Dec 2025 the registry grew from 17 to 30 registration IDs (16 to 29 organisations; Mercury holds two IDs) and from 9 to 12 auth servers. Five joined in the last ten weeks: Dubai Insurance (18 Aug), Standard Chartered (2 Oct), Zurich (19 Oct), EIB (20 Oct) and Al Buharia (27 Oct).
- "12 of 29" is not "41% working". The UAE runs a central API Hub that authorizes and issues tokens, so TPPs and infrastructure providers are not expected to publish an auth server. The gap to watch is the 10 LFIs with no issuer yet.
- Traffic is accelerating: 405,147 calls in Sep 2026, up 31.8% on Aug and roughly 15x Nov 2025; partial October (to 21 Oct) has already passed September. 16 LFIs and 17 TPPs had successful traffic in the last two completed months.
- Quality still has room to improve: payment success was 95.3% and the API error rate 18.4% across completed months (Nov 2025 to Sep 2026).

Production participants by role

29 organisations (30 registration IDs) in the production directory on 28 Oct 2026. Mercury holds two IDs, one TPP and one infrastructure (TSP), so it is listed in both rows but counted once in the totals.

Group	Orgs	Organisations
LFI, bank, auth server published	10	ADCB, ADIB, CBD, DIB, Emirates NBD, FAB, HSBC, Mashreq, NBF, Wio Bank
LFI, insurer, auth server published	2	ADNIC, LIVA
LFI, bank, no auth server yet	2	EIB, Standard Chartered
LFI, insurer, no auth server yet	8	Al Buharia, Al Wathba, Dubai Insurance, Emirates Insurance, Orient Insurance, Salama, Union Insurance, Zurich
TPP (BDSP/BSIP data & payments)	5	Lean, Mercury, NymCard, PAY TEN, Spare
Infrastructure / technical (TSP)	3	Mercury, Ozone API, Raidiam

API families declared (production)

Registrations declaring each family. Recent registry changes: Zurich joined (LFI) 19 Oct; EIB joined 20 Oct and added the LFI role 21 Oct; Al Buharia National Insurance Co joined 27 Oct.

Sources and method

Registry: public UAE Open Finance trust-framework directory (data.directory.openfinance.ae), production snapshot 28 Oct 2026, 12:08 UTC, via the Open Finance OS Observatory (openfinance-os.org/observatory).

"Auth server published" = at least one active authorization server with a non-empty issuer. Published metadata only; not tested for reachability, certification or traffic.

Activity: Al Tareq platform logs via Ecosystem Watch (openfinance-os.org/observatory/watch), observed 26 Oct 2026, data through 21 Oct 2026. 1,416,887 calls = completed months Nov 2025 to Sep 2026.

Bank/insurer split and TPP/infrastructure grouping follow openfinance-os.org/news ("12 of 30", 29 Oct 2026). That post counts by registration: the 30 registrations come from 29 organisations because Mercury holds two registration IDs, so "12 of 30" (by registration) and "12 of 29" (by organisation) describe the same data. Methodology: openfinance-os.org/observatory/methodology. Raw data: github.com/openfinance-os/community-website.
